

Improve your 'lights-out' Productivity...

...with Citizen's **CNC Alarm Alert System**

- System monitors your machines automatically alerting you should any alarms occur.
- Three forms of alerting - Voice alerts (synthesized speech) to fixed or mobile phone, Email alerts and SMS Text message alerts to mobile phone.
- Alarm description, time and machine name are sent with the alert to help you decide on necessary action.
- Three recipients can be assigned per machine for each type of alerting (nine in total per machine).
- Various functions such as 'alert scheduler' help you tailor the system to your requirements.
- Supports Citizen C, L and M series machines with a 'Windows' based control system.
- Ideal for companies without dedicated 'out-of-hours' staff.
- Reduce down-time and maximise your investment in Citizen machines, helping you to meet your production targets.
